METHOD AND SYSTEM FOR STORING AND RETRIEVING EXTENSIBLE MULTI-DIMENSIONAL DISPLAY CONFIGURATIONS

ABSTRACT OF THE INVENTION

A method and system for storing and retrieving

5   extensible multi-dimensional display property configurations.
In one embodiment, a method is disclosed for the display of
content that is configurable to a variety of contextual
environments by reading a plurality of settings that are
associated with an electronic device requesting content. The

10   plurality of settings defines the contextual environment of
the electronic device. The method continues by incorporating
the plurality of settings as values in the list of filter
criteria. The list of filter criteria is organized in a
hierarchical order and specifies the format within which to

15   present the content to be displayed at the electronic device.
Thereafter, the method continues by matching the list of
filter criteria with a resource to be displayed with the
content. The resource is retrieved from memory for ultimate
delivery to the electronic device for display.
